

Chronolog Station Setup Guide

Community Calibration Station — NASA / USGS / USFS Aligned

Purpose

This guide describes how to install and operate a Chronolog station as a high-temporal, fixed-viewpoint imaging node. Chronolog complements STELLA spectral measurements, GLOBE Observer protocols, and LCMS satellite products for public education and interpretation.

Site Selection Criteria

- Stable and safe location with a meaningful ecological view.
- Unobstructed scene with minimal moving foreground objects.
- Known GPS-verifiable coordinates.
- Consistent framing and documented view direction.
- Public accessibility without blocking walkways.

Installation Steps

- 1 Install the Chronolog mounting bracket at a fixed height.
- 2 Align the frame and confirm the intended view.
- 3 Record station metadata (location, coordinates, view direction).
- 4 Add the station to `chronolog_stations.json` and dashboards.
- 5 Post signage with QR code and instructions.

Operations and Maintenance

- Inspect the mount and signage regularly.
- Maintain a clear field of view.
- Document seasonal notes for interpretation.
